

SERGEY ORLOV

CREDIT DECISIONING | PUBLIC PROJECT OVERVIEW

Calgary, Canada | orlovtsu@gmail.com
orlovtsu.github.io | linkedin.com/in/orlovtsu

PROFESSIONAL SCOPE

At Cashco Financial, I design, build, and maintain credit decisioning software. My role connects model development with implementation, evaluation, business collaboration, and ongoing operation.

MY CONTRIBUTION

- Translate analytical and business requirements into implementable engineering work.
- Develop and evaluate models, prepare data, and connect analytical methods with software systems.
- Support document-processing and data-quality workflows.
- Maintain systems, investigate issues, and improve reliability and maintainability.
- Communicate technical choices and support collaboration across technical and business teams.

ENGINEERING APPROACH

I focus on clear responsibilities, deliberate evaluation, and software that can be maintained after its first release. My work spans the analytical and engineering parts of a project, with attention to how the complete system is used and supported.

INDEPENDENT PUBLIC DEMONSTRATIONS

Open Decisioning Lab illustrates calibrated synthetic modeling, an explicit policy layer, and typed API contracts.

SCOPE OF THIS OVERVIEW

This document describes professional responsibilities at a high level. The public labs are separate demonstrations and should not be interpreted as employer implementations, operational configurations, or performance reports.
